Hiring Manager

Target Company Name

Location

Dear Hiring Manager,

Driven **Technology Leader & Product Owner** with over 16 years of experience engineering high-performance platform architectures and financial technology systems for global institutions including UBS and Citi. Proven track record of executing enterprise cloud strategy, driving cloud migrations across Azure and private environments, and optimizing mission-critical infrastructure to boost resiliency while reducing operational costs.

In my recent role at UBS, I led the modernization of platform architectures, integrating Active Directory with Azure Graph API and deploying custom Model Context Protocol (MCP) servers to automate enterprise entitlement workflows. Prior to UBS, my 10-year tenure at Citi involved architecting high-throughput microservice platforms processing 2M+ daily trade feeds with Spring Boot, Kafka, and Redis.

I am eager to bring my expertise in enterprise cloud strategy, platform resiliency, and cross-functional leadership to your team. Thank you for your time and consideration.

Sincerely,

Arpit Jain
